

To Whom It May Concern:

I completely oppose any regulation that would allow BPL by the power companies. This would cause extreme interference to most HF & VHF operations and communications on these frequencies would become un-usable. I, as a Amateur Radio Operator, support and participate in local community emergency response teams. The interference to these emergency services would be very detrimental to their existence and service to the community. Multiply this community by the nationwide number of emergency services and this would be nationwide catastrophe. Please DO NOT allow BPL to be used at these frequencies! Our nation's safety and security is at stake!
